

# RAPTOR RIG

MPC Kinetic developed the Raptor Rig, a fit-for-purpose workover rig specifically designed for the Australian CSG market, surpassing API and AS/NZ industry standards.

## SEE IT:

MPC Kinetic identified that conventional workover rigs are not designed for Australian conditions due to their large size limiting the ability to maneuver and work on multiple wells on small lease pads. Conventional rigs require larger crews, longer set up time and costly, time-consuming road escorts when mobilising.

## SOLVE IT:

MPC Kinetic developed a fleet of road compliant workover rigs, thereby eliminating the need for escorts. The Raptor Rig can be set up in under 45 minutes using fewer crew members and perform the same task on CSG wells as conventional rigs. The rigs have demonstrated an efficiency increase of over 20% compared to traditional rigs.

## DO IT:

MPC Kinetic has a fleet of seven Raptor Rigs which are currently working on lease pads and are reducing workover costs for clients. These innovative rigs reduce safety hazards due to rig design aspects such as safer catwalk areas and minimising manual handling.
