

CABLE CRAWLER

MPC Kinetic's innovative cable crawler is the fastest and safest method for installing High Voltage and Fibre Optic cable within the industry. The purpose-built machine provides clients with a cost-effective and safer solution for installing cables up to 110mm in diameter.

SEE IT:

MPC Kinetic identified inefficiencies with the industry standard for installing High Voltage and Fibre Optic underground cables which required a minimum of six team members to perform the job.

SOLVE IT:

MPC Kinetic's solution was to develop the Cable Crawler to improve the efficiency of installation for its clients.

DO IT:

The result of this innovation has seen MPC Kinetic raise the standard when it comes to the fastest and safest method for installing High Voltage and Fibre Optic cable within the industry, providing clients with a cost-effective and safer solution for installing cables.
