

Running on the power to change...

Impressive! That was the sentiment of our Executive and Senior Management Team after visiting AUSEV's Brendale facility this week to check out the remanufacturing operations of the Ford-150 Lightning EV Ute. As part of MPK's energy transition journey it will be putting six of these EV Utes into its field operations to reduce the company's diesel fleet and the carbon the company emits. We'll keep you posted once they come off the production line and our teams start putting them through their paces out in the field!

MPK. Right solutions. Right people. Right for the future.
