

A big effort on the road sees our safe driver club grow!

When it comes to safe driving, our people are showing us they're on board, with 527 drivers recording perfect 100s in the Q2 Red, Amber, Green (RAG) report.

Collectively, our drivers have clocked up an amazing 1,596,089 km driven safely either from, to or across our project spreads.

And if that impressive stat doesn't grab you, then consider this.

It's the equivalent of driving to the moon four times, inclusive of all obligatory lunar servo stops for a dimmie and crumbed saus.

So, a big well done to all of our people who've continued to focus on their driving behaviour and made sure they and their work mates are always travelling safely.

Your big safety effort has resulted in reductions in speeding, failing to wear seatbelts and taking required rest breaks, and of course, that really hard habit to break - not using mobile phones while driving.

We understand the instalment of cab cams to monitor for fatigue and distraction while at the wheel was a big step for everyone.

But since installed, the audio and rumble alerts have come into play a number of times and flagged fatigue events that could have ended a whole lot differently for the drivers involved if they hadn't been in place.

So folks, cab cams will now be very much a part of our safe driving tool kit because they've already proven they keep our people safe on the road.

And while we know getting home safely after work is more than enough reward for you and your families - let's not forget.

If you do the right thing and score perfect 100s in your quarterly RAG report, you could also go home safely with a \$1000 travel voucher in your back pocket to use while on your R&R.

This quarter's randomly drawn winner for the Safe Driver Award was Nathan Kerr (right) on our Santos GLNG Project, seen here receiving his prize from Area Superintendent John Jennings.

Nice work Nathan – enjoy your trip away!
